

# PROBLEM

Mass media of each of the countries tell information which exposes to the best advantage some certain country for the military conflict. Thereby, ordinary inhabitants don't know to whom to trust – information from sources are so different. There are no unambiguous reliable sources of information through which it is possible to know about the real situations.

# PROBLEM

For example, in Kiev or the Donetsk Republic among inhabitants long time there were fierce disputes on the one who is actually guilty of the events – the majority of them didn't see it with own eyes, and they found information from mass media.

# IDEA

We will show to the world about happenings in "hot spots" on the air – by eyes of locals.

# SOLUTION

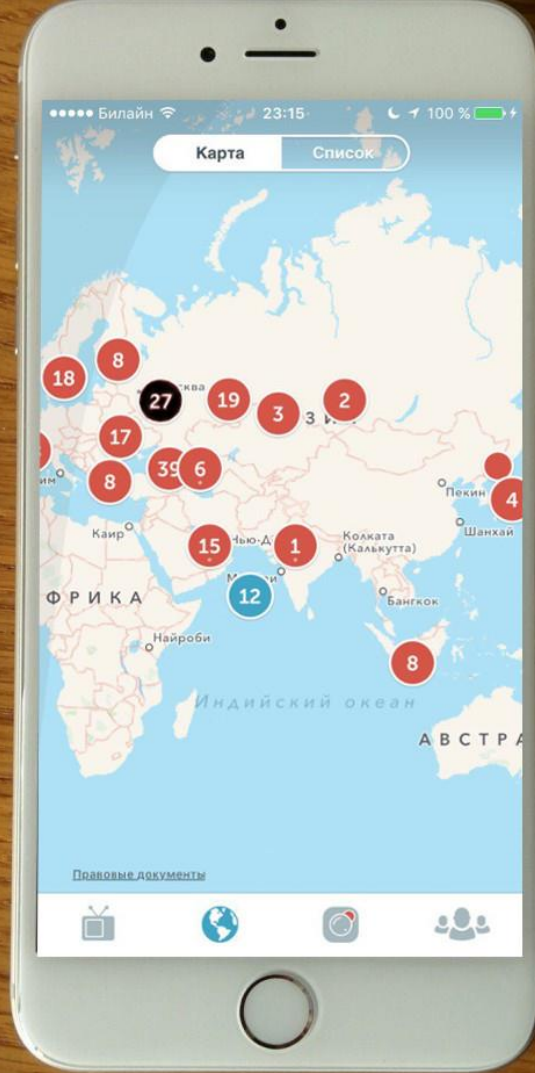

Periscope is the most independent mass media in the world.

# HOW IT WORKS

On a homepage of the Periscope will be available the map with the broadcastings from hot spots started by ordinary inhabitants in real time. The broadcasting person puts a hashtag #truthaboutwar, and send the post to Twitter. Broadcasting with hashtag #truthaboutwar are marked black dot on the card of broadcastings. If there are a lot of such broadcastings from one point – the place is marked as a potential zone of the military conflict.

# RESULTS

Because the broadcastings are available only in real time and with the real geolocation, it will be impossible to give false information. Thus, people will be able to know the truth about the events in a conflict zone.
